

ABSTRACT

***Design product welding mask to facet convenience and mobility in producing work more effectively and efficiently
Case study: PT Loka Ganda Artha Welding worker***

Welders was a job with special skills in terms of welding or connecting a noun made of aluminium, steel, kind of iron or other metals. For the industry, more commonly known as the welders should have held special skills to do this. Welder own produce focus the work different as it is focusing on work las light as las households, fences and others, his is welding medium where las has started focusing in industry, as lang order vehicles, las order buildings and others. Welders and in working have a risk threat to safety and risk the most dangerous and could seriously undermine the future welder a spring, which of the resulting from las can produce long term effects led myopia and blind. The purpose of this research To produce a product design welding mask to give the convenience and mobility in producing good work more effectively and efficiently.
