ABSTRACT

Odoo is software or software used to help carry out Enterprise Resource Planning (ERP). Odoo ERP system is enterprise resource planning software used across the enterprise for business process management. There are still many companies that use sophisticated computers only for simple administrative purposes. PT Wibicon Karya Indonesia developed the Odoo system by developing more complete features so that partners can use it optimally. The expected result of making this application is to support partners so that they can manage company data and activities more optimally.
