ABSTRACT

Glamping Lakeside is a tourist area located in Rancabali District with a modern resort concept. Behind its natural beauty, road access to attractions is one of the things that tourists complain about. Motorcycles are a reliable means of transportation for flexible exploration. Adventure-style motorcycles are one type of motorcycle that can be used. The purpose of this research is to facilitate tourists with an adventure-style electric motorcycle transportation tool that can provide new sensations with high practicality. This research was conducted on the grounds that there are no transportation facilities available at tourist attractions with high flexibility that pay more attention to environmental issues.
