A traditional musical instrument is a tool that can produce sound/music that is unique to Indonesia only (Aryanti, 2013). In society, the popularity of traditional musical instruments is relatively low, so foreign music develops faster and traditional music is increasingly being forgotten. Lack of information about traditional musical instruments is the reason why people are less familiar with traditional musical instruments. With the Traditional Music Museum, people can find out about traditional musical instruments from each region. Not only knowing about musical instruments, the public will be introduced to music produced from these traditional musical instruments. However, there is one problem that people don't want to visit museums because the museum itself does not yet have attractiveness as a tourist attraction. Based on the explanation above, to overcome the problems that exist in the museum, it is necessary to create an attractive museum interior design that pays attention to the circulation flow between rooms and collection objects in order to achieve a recreational, educative and informative goal for visitors (Dimas Fadhillah Kurnianto, Tita Cardiah, Ratri Wulandari. 2018).

Keywords: *Traditional Musical Instruments, Museums, Technology.*
