

ABSTRACT
GAME DEVELOPER OFFICE INTERIOR REDESIGN
PT. AGATE INTERNATIONAL

PT. Agate International is a local Indonesian company specializing in game development. Agate's office is a type of industrial office where the office combines the types of work in one including administrative, marketing, and production. The background of this design is the need for more advanced infrastructure development to improve the video game industry ecosystem in Indonesia even better.

The method of designing the office of PT Agate International includes direct data collection techniques through field studies at the Agate office and field studies of the design location, literature studies to find data, and interviews to find answers to problems that want to be known directly to the source.

Based on these problems, the interior design of the Agate office uses a technological approach as the main concept in accordance with the segmentation of companies engaged in technology. In addition, the technologies used in the interior design of the Agate office are expected to increase employee productivity and creativity at work.
