

## ABSTRACT

*Design of a 4-star Business Hotel in Bandung with a Biophilic Approach and the Concept of "A Setting Characterized by the Harmony of Nature." In an era of increasing urban tension, the need for accommodations that offer a balance between nature and modern comfort is becoming more important. This study aims to design a 4-star business hotel in Bandung adopting a biophilic approach and the concept of "a setting characterized by the harmony of nature." This approach aims to create an environment that embraces natural elements, utilizes the beauty of nature, and offers a stay experience that positively impacts the well-being of guests. This research involves an in-depth analysis of the biophilic concept and its application in the hotel's interior design. By integrating natural elements such as greenery, artificial waterfalls, and natural lighting, the hotel creates an atmosphere of relaxation and tranquility. The selection of natural materials like wood, bamboo, and natural stone, along with the use of earth tone and neutral colors, further enhances the natural and harmonious ambiance within the hotel environment. The outcome of this design is a 4-star business hotel that not only meets the practical needs of businessmen and professionals but also provides a deep and meaningful experience. By merging the harmony of nature with modernity, the hotel creates a space where visitors can work productively, relax, and feel connected to nature. The concept of "a setting characterized by the harmony of nature" serves as the foundation for designing a stay experience that seamlessly blends the beauty of nature with modern comfort.*
