Dr. Yap Eye Hospital is the oldest Eye Hospital in Indonesia that has been established since 1923. Yogyakarta is one of the cities with the highest cases of eye disease in Indonesia. However, until now Yogyakarta only has one Eye Hospital so to fulfil the services of its patiesnts, Dr. Yap Eye Hospital needs to continue to improve service facilities, one of which is by adding LASIK surgery services. In meeting these needs, it is necessary to redesign Dr. Yap Eye Hospital by applying an eco interior design approach. This redesign aims to provide solutions to Eye Hospital problems related to space utilization, placement of signagem as well as air and lighting through an environmentally eeco interior approach by applying the concepts of land development, energy efficiency and conservation, material selection and environmental health and comfort to realize an adaptive and informative Eye Hospital interior so that service activities can run effectively without endangering its environment.
