

ABSTRACT

Interior Design of Special Eye Hospital in Bandung City with the Healing Environment Approach

This design is motivated by several things, the first factor is the fulfillment of eye hospital standards in accordance with government standards relating to the services that must be provided. The second factor is the existence of visual limitations in patients with eye disease which makes the design of the hospital must be able to adjust to these limitations. Another factor is the role of design that can support the healing process of eye diseases, as well as the potential for the design plan to be taken to provide a natural hospital atmosphere. With these factors, an eye hospital interior design is needed that is able to complete and adjust to the needs of the eye hospital, so that room users will still be able to feel the interior atmosphere of the room. Through the application of a Healing Environment which has sensory, natural, and psychological aspects as well as the application of adaptive, natural, and relaxed concepts, the interior of a special eye hospital is created which is able to adapt and meet the needs of eye hospitals, as well as being a medium for relaxation and supporting the healing process of eye disease.
