The Leuwipanjang Terminal provides various transportation services such as city transportation, city buses, intercity transportation within the province (AKDP) to western West Java such as Cianjur, Sukabumi, Bogor, Purwakarta, Karawang and Bekasi. This terminal also serves intercity and interprovincial transportation (AKAP) to Jakarta, Banten and Sumatra. The Leuwipanjang terminal is a gateway for many people coming to the city of Bandung and its surroundings, so this terminal is frequently visited by the general public both within the city and outside the city. The purpose of redesigning the Leuwi Panjang terminal is to make it easier for users to carry out existing activities with the existence of relationships between spaces that can accommodate activities inside which are supported by the Modern Natural Concept. So that makes the Leuwi Panjang Terminal in Bandung City a safe, comfortable Type A Terminal facility and can become a model for other bus terminals in West Java. The design method is in the form of primary data collected from field study observations, documentation, interviews, and questionnaires and secondary data from literature review.

Keywords: Terminal, type A, Human behavior, modern
