

ABSTRACT

Housing is a collection of a number of houses adjacent to infrastructure, facilities provided and often adjusted in one direction, namely RT/RW. Currently the Walet Regency City Housing is managed by the RT and is located in Pasarkemis, Tangerang-Banten, where many residents live in the housing complex. The problem that arises when a housing complex has many occupants is the difficulty of recording all occupants in detail and comprehensively. Therefore, the purpose of this research is to create a web-based citizen data collection system according to the SDLC (System Development Life Cycle) method. and use Sublime Text, XAMPP, HTML, PHP, MySQL, Bootstrap, CSS. By creating a citizen data collection website, the author hopes to make it easier for RT management in the Walet Regency City block to record all of its citizens.
