

Abstract

The Sumedang Regency public library is a type B library based on Sumedang Regency Regional Regulation Number 11 of 2016, and the number of annual visitors to the Sumedang Regency Library is 0.014%. Interviews were conducted directly at the Sumedang Regency Public Library with library officers or staff regarding problems that occurred at the Sumedang Regency Public Library Building. The results of the design make the Sumedang Regency Public Library representative for librarians and users with the theme adapting people with technology, making this library a technology-based literacy center. Likewise, the smart library approach aims to increase efficiency and effectiveness in management, library services, application of sustainable concepts, it is hoped with the existence of this new library increased visitor interest. The Sumedang Regency Public Library is a library intended for the wider community as a means of lifelong learning regardless of age, gender, ethnicity, race, religion, and socioeconomic status. The smart library approach is an approach based on intelligent digital information technology that can improve service quality, develop new services, and apply new information technology with the concept of prioritizing technological innovation as a smart service, using the concept of a green library that prioritizes the attractiveness of natural conditions, prioritizing the concept of good governance. smart by collaborating and partnering, prioritizing the concept of smart library service users who have smart library staff.
