

ABSTRACT

This research was conducted to prove what had been done in previous research, namely "Coconut Fiber Research as an Ecofriendly and Biodegradable Floor Material" Marcel Bondra, Andreas Pandu Setiawan, Poppy Firtatwentyna Nilasari (2018). In this study, the coconut fiber composite material can and is suitable to be applied to furniture that has a curved base shape because the material is strong, fire resistant and also easy to shape. So what will be done in this study is to prove the conclusion in the research "Coconut Fiber Research as an Ecofriendly and Biodegradable Floor Material" that the coconut fiber composite material can also be used as furniture that has a basic form of indentation, more precisely used as a component of furniture material. In researching coconut fiber as a furniture material, the method used by the author is R&D (Research & Development) The research and development method or in English Research and Development is a research method used to produce certain products, and test the effectiveness of these products.
