

ABSTRACT

Furniture is one of the products commonly used in daily activities, from private residences to public facilities. One place that utilizes furniture is the office of a logistics agency. In the office of a logistics agency, furniture serves various functions, including essential and supporting items. Due to limited space, the office of a logistics agency has a limited quantity of furniture within the premises.

The design of an organizer rack for the Sicepat Express Bojongsoang logistics agency aims to enhance efficiency and productivity in managing incoming and outgoing packages and goods from the logistics center. The main objective of this design is to create a well-organized storage system that facilitates accessibility and minimizes errors in delivery. In this design, an analysis is conducted to assess the needs of the Sicepat Express Bojongsoang logistics agency regarding package and item management. Subsequently, a study is conducted on the existing workflow and the identification of issues related to storage and package delivery. Based on the analysis results, an organizer rack is designed to fulfill these needs.
