

ABSTRACT

The current post pandemic of covid-19, especially for some in society, is traumatized or overly concerned, so they cannot be free to live in social society or blend in with society in general. One of the activities carried out with the family in this post-covid-19 pandemic was camping. Many accommodations in Indonesia today provide campervan vehicles for camping. To quote from Collins' English dictionary, the campervan is a type of van equipped with mattresses, cooking utensils, and other living equipment to allow the owner to live inside the vehicle. But campervan was permanently designed and huge, so it was limited to camping using campervan. Besides the campervan, there is the overland vehicle that is used for camping or long trips. Used to be an overland vehicle with a sport utility vehicle This type is part of a combination of 10 of the two types of cars that are passengers and off-road. From the above problem, researchers came up with a design for a makeshift camp device called a portable camper kit, using a Toyota fortuner utility vehicle. A portable camper design on an overland SUV Toyota fortuner uses qualitative methods. Doing data collections through journals and books, observing firsthand, and interviews by the method of designing the user centered design.
