

ABSTRACT

Wages Production is a manufacturing company as well as a trading company that manages shoe sales. In this final project, we will produce an application to record employee attendance and salary using a QR Code. Wages Production companies do not have records that record employee attendance and payroll. Employees come to work at 07.30 WIB and come home from work at 16.00 WIB. Payroll is done once a week with a daily calculation system. Applications made for Wages Production companies will record employee attendance and payroll using a QR Code. In addition, this application will generate financial reports in the form of general journals, general ledgers and payroll reports. This application is a web-based application using the waterfall method and the programming languages PHP and MySQL.

Keywords: presence, payroll, Qr Code.
