

ABSTRACT

Making web-based applications for PT. RAPP is a project that aims to meet company needs to increase business efficiency and productivity. This project involves the stages of determining requirements, designing applications, and developing applications as a whole. The application created has an easy-to-use interface and is integrated with existing databases. The main objective of this project is to increase work efficiency and find the right solution to the problem of selecting the nearest truck and recording the time in a particular activity.

Keywords: Web-Based Applications, Logistic Tracking.
