Abstract

Millennials and generation Z are generations born in 1997 to 2012, this generation has very different characteristics from previous generations, they are multi-tasking, mastering technological advances, critical thinking, love to explore and gather in groups. As a university library, currently the UIN Sunan Gunung Djati library still does not meet the needs of users, some of whom are millennials and gen Z. UIN Sunan Gunung Djatii Library also does not fulfil the comfort aspect and the interior of the room that has not applied Islamic characteristics. Therefore, to meet these needs, it is necessary to redesign the interior of the UIN Sunan Gunung Djati library using the "Smart Library" approach. With the theme "Attractive Library" and the "Dynamics Movement" concept, the library is designed to be more open with more dynamic circulation.

Keywords: *Library, Smart Library, Technology, Islamic*
