

ABSTRACT

The redesign of the Bureau of Economic and Development Administration office aims to create a work space in government offices that is attractive, efficient, more adequate, in accordance with the comfort of its users so that it can optimize user activities while still following the standards of facilities and infrastructure of applicable government regulations. The benefits of a work space that suits these users can make the work environment even healthier and more productive than before. The redesign of the office of the Bureau of Economic and Development Administration aims to create a work space in government offices that is attractive, efficient, more adequate, and suitable. with the comfort of its users so that it can optimize user activities while still following applicable government regulatory facilities and infrastructure standards. The benefits of a workspace that suits these users can make the work environment even healthier and more productive than before. In carrying out this design, it was carried out using interview methods, location surveys, precedent studies, literature studies, documentation and analysis which resulted in appropriate design concepts for this project. The most important thing to pay attention to is the behavior of the users of this building, namely office employees so that they can creating an efficient and comfortable interior for all of them.
