

ABSTRACT

The market value of the company's shares that is formed between the buyer and the seller when a transaction occurs is called the company's market value, because the market price of the shares is considered a reflection of the actual value of the company's assets. The value of the company, which is formed through indicators of the stock market value, is strongly influenced by investment opportunities.

This study aims to examine the effect of Profitability (ROA), Capital Structure (DER) and Company Size (SIZE) on company value proxied by Price to Book Value (PBV) in Mining sector Companies Listed on the Indonesia Stock Exchange in 2017 – 2021.

The data used in this study were obtained from the financial statements of Mining Sector Companies for 2017 - 2021. The population in this study were Mining Sector Companies for 2017 - 2021 which were listed on the IDX and 34 companies were obtained with samples selected based on 170 purposive sampling for 5 years. The method of data analysis in this study is panel data regression analysis. The method of analysis in this study used panel data regression analysis using software version 10.

The results of descriptive statistics show variations in company value, profitability, capital structure, and company size in mining companies. Simultaneous significance test shows a significant effect jointly between profitability, capital structure, and firm size on firm value. However, partially, only capital structure and firm size have a significant positive effect on firm value, while profitability has no significant effect.

Keywords: *Profitability, Capital Structure, Firm size, and Firm Value*
