

ABSTRACT

PT Pandyakira Pratama is a company engaged in providing labor in the field of information technology to support the application development project process through cooperation agreed upon by the company. Based on the internship that has been carried out, interns are placed at PT Jojo Nomic Indonesia and PT Tabel Data Informatika. The type of both companies is a startup that uses the Agile method as an application system development process. During the internship period at PT Jojo Nomic Indonesia was involved in the development of the Company Management Information System with the role of Officeless Implementor or Software Engineering Low Code No Code platform using the VanillaJS programming language. During the internship period at PT Tabel Data Informatika, interns were involved in the development of the Regional Government Information System with the role of Technical Consultant which is responsible for making financial reports through MySQL database queries. This final project book will discuss the activities during the internship and how the implementation of the courses in the study program is applied to the life of work.

Keywords: Internship, Development, Website, Information System.
