ABSTRACT

This final report is the final project for Information Systems Diploma III students of the Faculty of Applied Sciences, Telkom University. The purpose of writing this report is to find out the design of a system that is easy for users to use for mentoring applications and to know the feature requirements of each application at PT. AeroSystem Indonesia. The company manages forty-three applications, each with its own tasks and features, such as Aerotrans with driver monitoring features, e-briefings with flight crew monitoring features before departure, and many other applications with different features. Then the ODE 4 Application Tools System was designed which aims to facilitate the performance of the ODE 4 Team. With this Information System, managed applications can be monitored in one application, so that data can be centered in one application and can be managed by all employees who have access.
