

ABSTRACT

Laundry Restu is a self-employed business engaged in washing services. However, there are still problems in terms of the use of technology that has not been used optimally. Based on these problems, a laundry application was created that can overcome these problems. The process uses PhpMyAdmin as the manufacturing program and MySQL as the database. The results obtained from the applications that have been made include ordering features that can be accessed online, can record finances and prepare financial reports with the laundry application system which facilitates the admin in making financial reports. The application that has been made is also expected to be able to provide reports related to customer order data and financial data, so that it can assist the admin in controlling his business.
