

## ABSTRACT

---

*This final project report explains the development of the Klod.Id application, which aims to address issues in the product development and management processes within organizations. In today's complex business environment and increasing demand for DevOps resources, companies need efficient and cost-effective solutions. Klod.Id is an application that provides DevOps process automation and features to handle complex deployment processes. By utilizing this application, companies can improve team productivity, save on investment costs, and enhance the quality of the resulting products.*

*Keywords: DevOps, software development, product management, automation, efficiency, effectiveness, cost, team productivity, product quality.*
