

ABSTRACT

MAMHI Psychology Bureau Online Consultation Application is a web-based application used to conduct online registration and consultation. MAMHI Psychology Bureau is a psychology service company engaged in mental health services. The MAMHI Psychology Bureau does not yet have a web-based application that can conduct online registration and consultation. In working on this application using the waterfall method using the PHP programming language and MySQL database. Database design uses Entity Relationship Diagram (ERD) and describes business processes using Business Process Model and Notation (BPMN). Testing this application uses black-box testing and Usability Testing methods. The application built can store client data automatically, scheduling can be done without having to ask repeatedly to psychologists and clients can choose the desired psychologist themselves.
