

## ABSTRACT

---

*The MAMHI Psychology Bureau Online Consultation Application is a web-based application used for online registration and consultation. MAMHI Psychology Bureau is a psychology services company which operates in the field of mental health services. The MAMHI Psychology Bureau does not yet have a website-based application that can carry out online registration and consultations. In working on this application, the waterfall method was used using the PHP programming language and MySQL database. Database design uses Entity Relationship Diagrams (ERD) and describes business processes using Business Process Model and Notation (BPMN). This application testing uses black-box testing and usability testing methods. The application that is built can handle online registration and data from consultation results can be saved automatically in the application.*
