

ABSTRACT

Family Laundry is an example of a service company that has been established for 10 years. This laundry is a small business founded by Mr. Diman to help and facilitate the community, especially students in the service sector. The laundry business is located on Jalan Raya Bojongsoang, Sukapura, Dayeuhkolot District, Bandung City, West Java. Prior to the establishment of the laundry, the business owner had opened a laundry at his home in collaboration with Daur Tauhid. After closing the collaboration, Mr. Diman opened a Family Laundry which is located close to the Telkom University campus. The process of managing service records and financial reports is still done manually, and therefore it is necessary to make a Web-Based Application for Laundry Service Recording Management and Financial Reports to make it easier to manage laundry service income records carried out by employees at Family Laundry and produce more detailed reports. System planning, system analysis, system design, and database. Making application programs developed with PHP MyAdmin. The database used is MySQL. It can be concluded that the design and application of Web-Based Family Laundry Services Program Design Applications have been developed.

Keywords: Web-Based Applications, MySQL, PHP MyAdmin, laundry, management
