

ABSTRACT

Regional financial management plays an important role in supporting development and public services effectively and efficiently. To achieve this goal, the Regional Financial Management Agency (BPKD) acts as the entity responsible for managing the regional budget, accounting and financial reporting. In an effort to improve BPKD performance and transparency, the application of Enterprise Architecture Domain Business is important. The design of the Business Domain Enterprise Architecture can assist BPKD in achieving its strategic objectives through integration, coordination and optimization of business processes. Enterprise Architecture Domain Business includes business process modeling, organizational structure, financial information, and technology that supports regional financial management. In developing the SPBE Enterprise Architecture, there are several stages that must be carried out, including needs analysis, architectural design, business process mapping and evaluation. Based on the Regulation of the Minister of Home Affairs of the Republic of Indonesia number 19 of 2020 concerning Measurement of the Regional Financial Management Index. Based on the results of the measurement of the Regional Financial Management Index in 2018 - 2020 the Provincial Government of DKI Jakarta is in the category of needing improvement. Therefore, to answer these problems BPKD DKI Jakarta needs to apply the SPBE Enterprise Architecture in the business domain. It is hoped that the DKI Jakarta Provincial Financial Management Agency (BPKD) can optimize the use of resources and increase the accuracy and consistency of financial reporting. This system can also increase the transparency and accountability of regional financial management, as well as reduce the risk of fraud and irregularities in regional financial management.
