

ABSTRACT

Since the launch of the smart city program in 2013, the Bandung City Government has made various efforts to make Bandung a smart health city. The purpose of this study is to analyze the influence of the smart healthcare dimension on people's settled interest in the city of Bandung. So that an index is obtained that can be the final result of health intelligence or smart healthcare. Researchers use qualitative descriptive methods by applying resource persons based on the concept of the quadruple helix model. The results of this study illustrate the importance of the smart healthcare dimension in improving the quality of health services and its potential as one of the factors that influence people's interest in settling in the city of Bandung, with an index value of 86.8, which means it is good. Based on the results of the research, it is expected to explore potential and have valuable resources to develop smart healthcare comprehensively and sustainably.

Keywords: Dimensions of smart healthcare, Interest in Sedentary, City of Bandung
