ABSTRACT

PT. Glostar Indonesia is a company engaged in manufacturing. Which is on Jalan Pelabuhan II No.KM, RW.5, Bojong, Kec. Cikembar, Sukabumi Regency. In managing employee salaries and attendance, several problems arise, namely recording salaries and presentations which are still done manually, which can cause many problems such as data corruption due to loss, human error and others. Therefore, a system was created to manage the payroll process and employee attendance. This web application was built using the waterfall model and uses the PHP CI (Codeigniter) programming language and MySQL database. This application will be built to calculate employee salaries and view employee attendance history. The results for this application can be used for solutions to difficulties that often occur at PT Glostar Indonesia
