

ABSTRACT

Pompi Songket Shop is a Micro, Small and Medium Enterprise or abbreviated (UMKM) which operates in the field of selling songket cloth, ulos and woven cloth kebaya. Sales are still done manually. This recording can cause errors in recording and thus affect preparation of financial reports. As technology develops, technology is built an application that can handle the sales process, with this application can help the owner and employees who work there to create data legitimate. Therefore, an application was created using a programming language Codeigniter framework and MySQL database. This application is able to produce General Journal, Ledger, Purchase Report, Sales Report and Stock Card. Functionality tested using the Blackbox Testing method.

Keywords: Purchasing, Sales, Inventory, MySQL, Blackbox Testing
