

ABSTRACT

This research aims to increase sales by using the QRIS method for payments at PT Mulya Jaya. QRIS is an online payment method that functions to make it easier for sales and buyers to carry out payment transactions without the need to make transfers. QRIS can make payments from various digital wallets and digital banks. This research uses the Waterfall method to carry out system development. The development stages of this application include needs analysis by conducting interviews and literature studies, then system design using Use case Diagram, BPMN, and ERD. Then the next stage is implementation using the PHP and MySQL programming languages as database managers. Lastly, testing uses the black box testing method. It is hoped that with this application sales can continue to increase, financial records will be more organized so that owners can see sales records and see sales profits.

Keywords: Inventory and Sales using QRIS
