ABSTRACT

The business world is growing rapidly, both the automotive industry, clothing, food, beverages, and other industries. This provides opportunities for business actors. The phenomenon of the Covid-19 pandemic has also forced a number of MSMEs to transform from conventional to digital. The rapid development of social media is a driver for business actors, both in the field of products and services, to do marketing through social media or social media marketing. This can be seen from social media users who increase every year with various social media platforms used. One example of social media marketing that is widely used is Instagram. PT. Maresto Inovasi Indonesia is a company that makes service applications in restaurants by supporting many payment methods. So, with the application made by PT. Maresto Inovasi Indonesia's ordering and payment of customer orders can be made at the table or seating provided by the restaurant. In this case, Maresto promotes through Instagram because it is considered effective enough to communicate with followers. However, followers @marestoid still do not understand the content that has been provided. Therefore, this study aims to determine the effectiveness of engagement metrics social media on Instagram Maresto with the engagement metrics method.
