

ABSTRACT

INTERIOR DESIGN OF *4-STAR HOTEL* RESORT IN DAGO WITH *THE WELLNESS TOURISM APPROACH*

During the COVID-19 pandemic, individuals' interest in physical, mental and spiritual health has increased. In addition to increasing public awareness of health, the COVID-19 pandemic has also caused a significant impact on mental, social and economic health in Indonesia. Based on this phenomenon, the development of *wellness* facilities is needed. This research focuses on the implementation of wellness facilities at Astamaya Hotel located in Dago Pakar. From the observations there are some imperfections still visible, such as visual concepts that have not supported the healing process, and inconsistent facilities. Therefore, this design aims to present an interior atmosphere that relaxes and stimulates a sense of happiness, directed circulation to facilitate the movement of visitors to access available facilities, and realize facilities that consistently help the *healing process*. The research method used in the preparation of this final project is a qualitative method, by collecting data through interviews, literature studies, and comparative studies of resort hotels with similar typologies in West Java. The collected data will be analyzed and implemented in the form of technical working drawings, 3D visual presentations, and animations. In the introductory report of this final project work, qualitative methods are used by collecting data through interviews, literature studies and comparative studies on resort hotels that have the same typology in the West Java area. The collected results will be analyzed and designed into technical work drawings and presentations, 3D visuals, and animations. In the results of this design, a general floor plan was made in the form of the main building *of the hotel and wellness center* along with a special floor plan consisting of a lobby, guest rooms, villas, restaurants, and spa and fitness. With this design, it is hoped that the factors that contribute to the healing process in resort hotels can be fulfilled, making it a superior wellness destination accommodation option in the Dago area.
