

ABSTRACT

NEW INTERIOR DESIGN OF PET HEALTH CARE IN BOGOR CITY WITH A HEALTHY PET ENVIRONMENT APPROACH

Bianca Millennia Tika Sari

This pet health care design aims to design pet health facilities and solve problems, namely the lack of attention to the physiological and psychological comfort of pets and the lack of maximizing health facilities for pets in outpatient and inpatient care. To answer the problems that occur in design, it is therefore necessary to design a new interior for pet health care with a Healthy Pet Environment approach which will be applied to create a space that can fulfill activities in pet health care effectively and efficiently. Implementation of this approach takes the form of using acoustic wall and ceiling treatments to absorb the noise generated by pets so that they feel comfortable both psychologically and physiologically, using audio to calm animal and human users so they feel comfortable, lighting arrangements and using types of air circulation in the clinic. Each activity will influence the needs and conditioning of space which will directly influence the interior design of pet health care in the city of Bogor.
