*The fourth industrial revolution, or creative industries period, has begun, and with it a new phase of economic globalization. As time goes by, more and more companies are popping up in Indonesia, sometimes even every month. Coworking is a place that is really needed as a means to accommodate startup business people, freelancers and companies. Bandung Conclave is a Co-working space in Bandung which provides a place with an Office Rental system and is one of the Co-working spaces in Bandung which offers community and collaborative values to its users. There are problems found in designing the Conclave Coworking space, namely Facilities Existing coworking does not meet the standards of a coworking. The purpose of this design is to review and re-evaluate the existing condition of the Conclave building in order to find out how successful the Conclave building is in applying design standards. Through this design, it is hoped that we can design a coworking space that provides facilities according to user needs and is comfortable to use by implementing coworking space values. The method used to collect data is a qualitative method which includes observation interviews, field studies, documentation and literature studies. Which from the results of data collection itself aims to be able to obtain the goals and objectives of the plan. The theme applied in the design, namely "Connecting each other", was formed from the desire to enable freelancers/startups to interact with each other, with a tropical industrial design concept, which makes the space feel flexible but seems serious.*

**Keywords:** *Coworking, facilities, interaction*
