

Abstract

Increasing Metro-E capacity is one of many strategic steps in the network expansion process.

Several activities that need to be carried out include module upgrades, intranode migration, and TiMOS upgrades in order to achieve the expected increase in Metro-E capacity.

The conclusion of this activity is that increasing the capacity of Metro-E is one of the many activities included in the Metro-E implementation activity which is a strategic step in network expansion. This aims to expand the reach of PT's network. Telkom Indonesia with additional capacity will minimize slowdowns in customer connections in the area.
