

ABSTRACT

The WarmingUP project, established by students Telkom University, is a platform that provides high-quality and affordable halal food and beverages, as well as micro coworking space services. The purpose of this study is to meet the learning and working needs of students in a comfortable environment and to provide quality and safe food according to Halal standards. The reason for this research is to address the issue of low food quality and the lack of conducive workspaces in the campus environment. The methods used in this study include data collection from Telkom University students, needs analysis, and the development of applications and coworking space services. The results of the study indicate that WarmingUP can support the collaboration ecosystem and contribute to the achievement of the Sustainable Development Goals (SDGs). These findings show that WarmingUP has successfully become an effective solution for students and the academic community.
