

ABSTRACT

The internship program is a mandatory activity for students and is often a graduation requirement at various universities. Internship experience helps students apply knowledge and competencies in college to the real world of work, as well as understand the world of professional work both in agencies and industry. Seven Inc, as a developing company, realizes the importance of efficiency in intern attendance management. With the increasing number of apprentices and the complexity of tasks, the need for attendance web applications has become crucial in making it easier to record attendance, monitor and analyze attendance data. This web application allows creating automatic attendance reports, managing schedules, and reducing human errors. The implementation of the presence web application is expected to increase productivity and optimize human resource management. This web application will be developed in two different projects for frontend and backend. The frontend will be designed using Figma and built using the Next.js framework and the backend will use the Laravel framework. This writing will focus on developing the frontend or interface by integrating APIs for testing and communication in the system.
