PREFACE

This thesis represents the culmination of an extensive research journey in Computer Science. It seeks to contribute to the existing body of knowledge by addressing bottleneck and performance indicators within the BPJS dataset related to providing recommendations for improvement of breast cancer treatment procedures in the BPJS dataset.

Throughout this work, I comprehensively review the literature, present empirical findings, and offer critical analysis. This thesis reflects my dedication and the collective efforts of those acknowledged in the preceding section.

The acknowledgement section above highlights the essential support and contributions of my research advisor, collaborators, funding organizations, research participants, family, and friends. Their influence shaped the content, quality, and direction of this thesis.

I hope this thesis serves as a valuable resource for scholars, practitioners, and anyone interested in Computer Science. I look forward to continued discussions and explorations in this area of research.
