

REDESAIN KANTOR BUPATI KABUPATEN SUMEDANG DENGAN PENDEKATAN LOKALITAS

ABSTRACT

The Sumedang Regency Government Office located on Jl. Prabu Gajah Agung, North Sumedang, has a three-story building with an area of 7,883 m² and operates from Monday to Friday. This office has implemented an Electronic-Based Government System (SPBE), which changes the way of working from manual to digital, reduces paper use and increases the need for modern facilities. Based on the data obtained, inefficient zoning-blocking, lack of office facilities, lighting in some rooms does not meet standards, soundproofing is ineffective, and security and ventilation systems need improvement. This study identified the need for lighting improvements, additional signage, and improvements to acoustic and ventilation facilities. Redesign is proposed to improve the comfort and efficiency of the workspace of the Regent, Deputy Regent, his assistant, as well as meeting and guest rooms, with the aim of creating a more productive work environment and in accordance with applicable standards.
