

ABSTRACT

Central Beku is a umkm which operates in the trading sector. Central beku which sells several processed frozen foods or known as frozen food. Central beku is located in Tarogong Kidul District, Garut Regency, West Java Province. The problem faced by this frozen central is recording sales transactions which still use manual methods. Based on this problem, a web-based application will be built that can handle this problem. Applications built using the waterfall method.

Creating web-based applications for sales transactions and bar graphs is an information technology that aims to increase efficiency in managing financial data. This application is designed to assist businesses in monitoring and managing sales transactions. In the manufacturing process, an in-depth needs analysis was carried out.

Making this application is an effective solution in overcoming problems related to manual sales transactions. By using this application, umkm it can increase productivity and reduce errors regarding financial performance.
