

## LIST OF FIGURES

1.1	UAV technology has become one of the key technologies for 6G communications. . . . .	2
1.2	The illustration of the affected area after a natural disaster. . . . .	2
2.1	Block diagram of general classical communication system consisting of channel coding and modulation. . . . .	9
2.2	Traditional QC-LDPC codes consist of LDPC and Accumulator codes as MC and EP check, respectively. . . . .	11
2.3	Tanner graph for encoder and decoder of Accumulator codes with $P = 1$ . . . . .	12
2.4	Tanner graph from parity check matrix LPDC codes. . . . .	14
2.5	Tanner graph representation of LDPC encoder. . . . .	15
2.6	Tanner graph representation of LDPC decoder. . . . .	16
2.7	The usage scenarios of IMT 2030 of possible use case in 6G. . . . .	18
2.8	The classification of artificial intelligence (AI). . . . .	19
2.9	Overview diagram of learning design framework. . . . .	20
2.10	Illustration of reinforcement learning using MDP framework including agent and environment. . . . .	25
2.11	The backpropagation in graph for forward pass. . . . .	25
2.12	Neural network consists of input, hidden, and output layers. . . . .	27
2.13	An example of simple NN with three layer. . . . .	28
2.14	Forward pass for backpropagation round 1. . . . .	29
2.15	Backward pass for backpropagation round 1. . . . .	29
2.16	The performance of three neurons of neural network. . . . .	30
2.17	Box-plus operation using LLR value with difference equation. . . . .	31
3.1	The proposed RL-based rateless coding scheme, where RL is for the rate determination and TL-based QC-LDPC decoding process. . . . .	35
3.2	TL framework for rateless decoding scheme. . . . .	36
3.3	The Tanner graph representation of QC-LDPC decoder. . . . .	37
