

LIST OF FIGURES

2.1	Typical pipeline for semantic mapping, integrating object detection with SLAM-generated maps [1].	8
2.2	Logitech C920 Pro HD Webcam used in the project.	9
2.3	RPLIDAR A1 used in the project.	10
2.4	Robot Operating System (ROS) with various hardware platforms and tools, including Arduino, Raspberry Pi, robotic arms, LiDAR sensors, and terminal interfaces, showcasing ROS's versatility in enabling robotic development across different devices. [2]	11
2.5	SLAM results using Gmapping techniques, (a) Indoor mapping, (b) Outdoor mapping [3].	13
2.6	YOLOv3 object detection process after model training. The steps include resizing the image, running the convolutional network, and applying non-max suppression to detect objects like a person, dog, and horse [4].	15
3.1	The proposed method integrates object detection with SLAM by using data from a camera, LiDAR, and odometry to generate a real-time semantic map.	19
3.2	System design showing the input from the camera, LiDAR, and odometry processed by ROS on an Arduino Mega-mini Pro, resulting in a semantic map.	20
3.3	Arduino schematic for power distribution, motor control, encoder feedback, and remote communication using the Arduino Mega Pro Mini.	21
3.4	Overall system architecture and data flow for semantic mapping. . .	23
3.5	The robot platform equipped with a LiDAR, camera, Jetson Nano, and odometry encoder for navigation and control.	24
3.6	Perspective of the Camera and LiDAR Sensor for Object Detection and Mapping.	30
4.1	Map constructed using the Gmapping SLAM algorithm, capturing the geometric layout of the environment.	36

4.2	Object detection results using YOLOv3: detection of various objects such as bicycles, doors, trash cans, and kayaks in an indoor environment.	37
4.3	Semantic map with object markers overlaid, representing the integration of geometric and semantic information.	39
4.4	Visualization of the saved map and detected objects using matplotlib. The map shows the environment structure, while color-coded markers indicate the positions of detected objects, such as doors, trash cans, and bicycles.	45
