

LIST OF FIGURE

Figure 1.1 Research methodology.....	4
Figure 2.1 Elements contained in the radar.....	8
Figure 2.3 Fmcw system components.....	9
Figure 2.4 Doppler effect from chest movement	14
Figure 2.5 (a) a-scan, (b) b-scan, dan (c) c-scan.....	17
Figure 2.6 State of the art research.....	25
Figure 3.1 System model (a) previous research (b) proposed research	26
Figure 3.2 The existing fmcw radar system for detecting respiration vital sign under the ruins	27
Figure 3.3 Block diagram of the proposed method for reducing the effect of drone fluctuations on the detection of vital signs of survivors under ruins with fmcw radar	30
Figure 3.4 Illustration of vital sign detection using radar-drone.....	32
Figure 3.5 Workflow to detect vital signs and reducing fluctuations	33
Figure 3.6 Magnitude response of LPF output in the frequency domain when the target is under the ruins in static condition	34
Figure 3.7 Time domain representation of phase detector output in (a) fluctuation's ROI and (b) object's ROI in static condition.....	35
Figure 3.8 Time domain representation of phase detector output in (a) fluctuation's ROI and (b) object's ROI in dynamic condition	35
Figure 3.9 Frequency response of (a) lpf with 0.2 hz cutoff and (b) hpf with 0.1 hz cutoff.....	37
Figure 4.1 The type of drone used (a) factory drone and (b) assambled drone	39
Figure 4.2 Ruins modelling.....	39
Figure 4.3 Experimental model for detecting vital signs with fluctuating height.....	40
Figure 4.4 Flow diagram of radar data and ultrasonic data processing	41
Figure 4.5 Illustration of a fluctuation modeling laboratory experiment.....	42
Figure 4.6 Illustration of a small displacement detection system	43
Figure 4.7 Belt sensor output	43

Figure 5.1 Vital sign detection results with higher fluctuation frequencies in the (a) time and (b) frequency domains at a rate of 5 times per minute for frequency fluctuation	45
Figure 5.2 Vital sign detection results with lower fluctuation frequencies in the (a) time and (b) frequency domains at a rate of 20 times per minute for frequency fluctuation	45
Figure 5.3 Vital sign detection results with same fluctuation frequencies in the (a) time and (b) frequency domains at a rate of 25 times per minute for frequency fluctuation	46
Figure 5.4 Experimental model for detecting vital signs with fluctuating height without obstacle	47
Figure 5.5 Experimental results respiratory speed 9 times per minute. (a) frequency area normalized data from unwrapping output and ultrasonic sensor and (b) final results of respiratory vital sign detection.....	47
Figure 5.6 Experimental Results Respiratory Speed 10 Times Per Minute. (a) Frequency Area Normalized Data from Unwrapping Output and Ultrasonic Sensor and (b) Final Results of Respiratory Vital Sign Detection	48
Figure 5.7 Experimental Results Respiratory Speed 11 Times Per Minute. (a) Frequency Area Normalized Data from Unwrapping Output and Ultrasonic Sensor and (b) Final Results of Respiratory Vital Sign Detection	48
Figure 5.8 Measurement of the respiration with static wood.....	49
Figure 5.9 The magnitude response of LPF output in the static condition	50
Figure 5.10 Phase detector output in frequency domain (a) with target and (b) without target with static condition	51
Figure 5.11 Final results of respiratory vital sign with and without target in static condition experiment sample 1	51
Figure 5.12 Measurement of the respiration with dynamic wood	52
Figure 5.13 The magnitude response of LPF output in the dynamic condition.....	53
Figure 5.14 (a) Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 1	54
Figure 5.15 (a) Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 2.....	54

Figure 5.16 (a) Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 3.....	55
Figure 5.17 Measurement of the respiration with (a) factory and (b) assambled drone	55
Figure 5.18 The magnitude response of LPF output with drone.....	56
Figure 5.19 Time domain representation of phase detector output in (a) fluctuation's ROI and (b) object's ROI with drone	56
Figure 5.20 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 1	57
Figure 5.21 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 2	58
Figure 5.22 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 3	58
Figure 5. 23 Probability density function comparison with and without target with threshold	59
Appendix C.1 The magnitude response of LPF output in static condition experiment sample 2	71
Appendix C.2 The magnitude response of LPF output in static condition experiment sample 3	71
Appendix C.3 The magnitude response of LPF output in static condition experiment sample 4.....	72
Appendix C.4 The magnitude response of LPF output in static condition experiment sample 5	72
Appendix C.5 The magnitude response of LPF output in static condition experiment sample 6.....	73
Appendix C.6 The magnitude response of LPF output in dynamic condition experiment sample 2.....	73
Appendix C.7 The magnitude response of LPF output in dynamic condition experiment sample 3	74

Appendix C.8 The magnitude response of LPF output in dynamic condition experiment sample 4	74
Appendix C.9 The magnitude response of LPF output in dynamic condition experiment sample 5	75
Appendix C.10 The magnitude response of LPF output in dynamic condition experiment sample 6	75
Appendix C.11 The magnitude response of LPF output in dynamic condition experiment sample 7	76
Appendix C.12 The magnitude response of LPF output in dynamic condition experiment sample 8	76
Appendix C.13 The magnitude response of LPF output in dynamic condition experiment sample 9	77
Appendix C.14 The magnitude response of LPF output in dynamic condition experiment sample 10	77
Appendix C.15 The magnitude response of LPF output with drone experiment sample 2	78
Appendix C.16 The magnitude response of LPF output with drone experiment sample 3	78
Appendix C.17 The magnitude response of LPF output with drone experiment sample 4	79
Appendix C.18 The magnitude response of LPF output with drone experiment sample 5	79
Appendix C.19 The magnitude response of LPF output with drone experiment sample 6	80
Appendix C.20 The magnitude response of LPF output with drone experiment sample 7	80
Appendix C.21 The magnitude response of LPF output with drone experiment sample 8	81
Appendix C.22 The magnitude response of LPF output with drone experiment sample 9	81
Appendix C.23 The magnitude response of LPF output with drone experiment sample 10	82
Appendix C.24 The magnitude response of LPF output with drone experiment sample 11	82

Appendix D.1 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in static condition experiment sample 2	83
Appendix D.2 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in static condition experiment sample 3	83
Appendix D.3 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in static condition experiment sample 4	84
Appendix D.4 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in static condition experiment sample 5	84
Appendix D.5 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in static condition experiment sample 6	84
Appendix D.6 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 1	85
Appendix D.7 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 2	85
Appendix D.8 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 3	85
Appendix D.9 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 4	86
Appendix D.10 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 5	86
Appendix D.11 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 6	86

Appendix D.12 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 7	87
Appendix D.13 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 8	87
Appendix D.14 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 9	87
Appendix D.15 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target in dynamic condition experiment sample 10	88
Appendix D.16 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 1	88
Appendix D.17 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 2	88
Appendix D.18 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 3	89
Appendix D.19 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 4	89
Appendix D.20 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 5	89
Appendix D.21 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 6	90
Appendix D.22 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 7	90

Appendix D.23 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 8.....	90
Appendix D.24 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 9.....	91
Appendix D.25 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 10.....	91
Appendix D.26 Freq domain representation of phase detector output in fluctuation's ROI and object's ROI (a) with target and (b) without target by drone experiment sample 11.....	91
Appendix E.1 Final results of respiratory vital sign with and without target in static condition experiment sample 2.....	92
Appendix E.2 Final results of respiratory vital sign with and without target in static condition experiment sample 3.....	92
Appendix E.3 Final results of respiratory vital sign with and without target in static condition experiment sample 4.....	93
Appendix E.4 Final results of respiratory vital sign with and without target in static condition experiment sample 5.....	93
Appendix E.5 Final results of respiratory vital sign with and without target in static condition experiment sample 6.....	94
Appendix E.6 (a) Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 4.....	94
Appendix E.7 (a) Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 5.....	95
Appendix E.8 Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 6.....	95
Appendix E.9 Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 7.....	95

Appendix E.10 Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 8	96
Appendix E.11 Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 9	96
Appendix E.12 Phase detector output after and before correction in frequency domain in dynamic condition and (b) final results of respiratory vital sign with and without target experiment sample 10	96
Appendix E.13 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 4	97
Appendix E.14 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 5	97
Appendix E.15 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 6	97
Appendix E.16 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 7	98
Appendix E.17 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 8	98
Appendix E.18 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 9	98
Appendix E.19 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 10	99
Appendix E.20 (a) Phase detector output after and before correction in frequency domain with drone and (b) final results of respiratory vital sign with and without target experiment sample 11	99

Appendix E.21 Belt sensor respiration pattern output with drone experiment sample 9	112
Appendix E.22 Belt sensor respiration pattern output with drone experiment sample 10	112
Appendix E.23 Belt sensor respiration pattern output with drone experiment sample 11	113
Appendix F.1 Belt sensor respiration pattern output in static condition experiment sample 1	100
Appendix F.2 Belt sensor respiration pattern output in static condition experiment sample 2	100
Appendix F.3 Belt sensor respiration pattern output in static condition experiment sample 3	101
Appendix F.4 Belt sensor respiration pattern output in static condition experiment sample 4	101
Appendix F.5 Belt sensor respiration pattern output in static condition experiment sample 5	102
Appendix F.6 Belt sensor respiration pattern output in static condition experiment sample 6	102
Appendix F.7 Belt sensor respiration pattern output in dynamic condition experiment sample 1	103
Appendix F.8 Belt sensor respiration pattern output in dynamic condition experiment sample 2	103
Appendix F.9 Belt sensor respiration pattern output in dynamic condition experiment sample 3	104
Appendix F.10 Belt sensor respiration pattern output in dynamic condition experiment sample 4	104
Appendix F.11 Belt sensor respiration pattern output in dynamic condition experiment sample 5	105
Appendix F.12 Belt sensor respiration pattern output in dynamic condition experiment sample 6	105
Appendix F.13 Belt sensor respiration pattern output in dynamic condition experiment sample 7	106
Appendix F.14 Belt sensor respiration pattern output in dynamic condition experiment sample 8	106

Appendix F.15 Belt sensor respiration pattern output in dynamic condition experiment sample 9	107
Appendix F.16 Belt sensor respiration pattern output in dynamic condition experiment sample 10	107
Appendix F.17 Belt sensor respiration pattern output with drone experiment sample 1	108
Appendix F.18 Belt sensor respiration pattern output with drone experiment sample 2	108
Appendix F.19 Belt sensor respiration pattern output with drone experiment sample 3	109
Appendix F.20 Belt sensor respiration pattern output with drone experiment sample 4	109
Appendix F.21 Belt sensor respiration pattern output with drone experiment sample 5	110
Appendix F.22 Belt sensor respiration pattern output with drone experiment sample 6	110
Appendix F.23 Belt sensor respiration pattern output with drone experiment sample 7	111
Appendix F.24 Belt sensor respiration pattern output with drone experiment sample 8	111
