# ABSTRACT

*"Development of Windows-Based Point of Sale Application for MSME Sales Transactions in Telkom University Area" is a final project that aims to build a Point of Sale application that provides resources for MSME. Traditional transactions often cause miscalculations and impracticality. In addition, traditional transactions often cause errors in recording business expenses and income. To overcome these problems, the author created a Windows-based Point of Sale Application that allows the purchasing system to be more convenient. This is intended to improve the security and efficiency of transactions, as well as reduce business actors' concerns about recording errors. So it is hoped that this application can provide a better user experience and help MSME in the Telkom University Area in managing sales transactions more efficiently and organized.*
