ABSTRACT

The "Sexual Harassment Case Handling Application" project aims to provide a comprehensive solution in reporting and handling sexual harassment incidents within SMK 2 Sijunjung. This application is designed with the SDLC Waterfall method, which includes requirements analysis, feature design, and user evaluation to ensure optimal functionality. The "SaveMe" application is designed as a safe and efficient digital solution to facilitate data management of sexual harassment victims at SMKN 2 Sijunjung. This application provides features that allow students to share their experiences, do case reporting, and can find out how the psychological condition of students. The results show that innovative digital solutions are needed to handle sexual harassment cases more effectively, while maintaining privacy and providing appropriate protection and support for victims.
