

Figures

Figure 1 Individual animation frames of a character walking from DangerMouse.....	15
Figure 2 A rubber ball bouncing in motion.	17
Figure 3 A kick is shown with squash and stretch applied.	17
Figure 4 An animation of a person running.	18
Figure 5 A game screenshot of anticipation for a punch followed by the execution of the punch.	19
Figure 6 An example of good staging and bad staging.....	20
Figure 7 Game screenshots of Super Mario World and Super Mario RPG...	21
Figure 8 An example of follow-through and overlapping action with a squirrel's tail.	22
Figure 9 An example of a hand moving in an arc and a hand moving in a straight linear motion.	23
Figure 10 An example of a person eating with and without secondary animation.....	24
Figure 11 An example of twinning followed by an example of how to make it look more natural.	26
Figure 12 Blender's breakdown tool in action.	27
Figure 13: A 3D model of a human head.....	28
Figure 14 An example of a texture along with the 3D model it is attached to.	29
Figure 15 A character shown with stretched limbs.....	30
Figure 16 A character rig for a game.	31
Figure 17 Visualization of the difference between IK and FK movement. ...	31
Figure 18 Character designs of Disney's Aladdin.....	33
Figure 19 The weretiger from Altered Beast.	37
Figure 20 The default attack for the weretiger in Altered Beast.....	38
Figure 21 The frames of the default attack for the weretiger in Altered Beast.	38
Figure 22 The tail of the weretiger in motion in Altered Beast.	39
Figure 23 The weretiger in the Twisted Scrolls Concept Teaser.....	39

Figure 24 Screenshot of the Twisted Scrolls Concept Teaser.	40
Figure 25 The weretiger from Twisted Scrolls readying its claws.	41
Figure 26 The weretiger from Castlevania grabbing the player.	42
Figure 27 Results of how much of the questionnaire participants knew about Cindaku.	43
Figure 28 Results of how willing the questionnaire participants are willing to try a game based on Cindaku.	44
Figure 29 The parkour seen in Assassin's Creed.	44
Figure 30 Initial character design for the Cindaku.	46
Figure 31 Strongman, Brian Shaw, performing the deadlift at the 2017 Arnold Strongman Classic.	47
Figure 32 Kerinci merchants with a buffalo.	47
Figure 33 A group of forest people (<i>orang rimba</i>) in Jambi before the year 1939.	48
Figure 34 Cindaku character design with and without clothes.	48
Figure 35 The high-poly model of Cindaku before it is turned into low-poly.	49
Figure 36 The low-poly model of the Cindaku.	50
Figure 37 The normal map for the body of the Cindaku 3D model.	51
Figure 38 The low-poly model of the Cindaku using the normal map.	51
Figure 39 The texture for the body of the Cindaku 3D model.	52
Figure 40 Perspective view of the game-ready Cindaku 3D model.	52
Figure 41 A default meta-rig next to the adjusted meta-rig fitted to the Cindaku 3D model.	53
Figure 42 The completed rig for the Cindaku 3D model.	53
Figure 43 The weight painting/skinning view in Blender.	54
Figure 44 The color spectrum for skinning in Blender.	55
Figure 45 An example of bad skinning (left) and good skinning (right).	55
Figure 46 Two different takes for a "damage" animation reference.	56
Figure 47 The Cindaku looking around in its Idle animation.	57
Figure 48 The tail swaying back and forth during the Cindaku's walk animation.	58

Figure 49 Screenshot of the reference video used for the Cindaku's walk cycle.	59
Figure 50 Bengal cat walking on a treadmill.	60
Figure 51 An attack animation for a game with a smear applied.	60
Figure 52 The Cindaku's attack animation with a smear.	61
Figure 53 The Cindaku "charging up" its roar.	62
Figure 54 The Cindaku 3D model in Unity.	63
Figure 55 The view of the Animator window, showing the contents of the Animator Component.....	63
Figure 56 Alternative views of the in-game camera.	65
Figure 57 Screenshot from the reference video for Cindaku's idle animation.	65
Figure 58 The placement of UI elements in the game.	66
Figure 59 The game prototype running on an Android device.	67
