
LIST OF TERMS

Terms	Definition
Point of Interest	Tourist attraction
Fitness	A value to measure how good the solution produced by an algorithm is
Objective function	The mathematical function to evaluate the quality of solutions in the optimization process of the Artificial Bee Colony (ABC) algorithm and Improved Artificial Bee Colony algorithm based on reverse learning Harris Hawks Optimization (HABC), resulting in a fitness value that indicates how optimal the solution is
Time window constraint	The constraints that limit the vehicle operating time (time windows of the vehicle), the opening and closing hours of the POIs (time windows of the POIs), and the time required to visit each POI (POI visiting duration, which reflects the time spent by the user at each POI)
