Batik is one of Indonesia's cultural heritages that has existed for a long time and continues to evolve over time. One of the innovations in batik is the layering coloring technique which has been researched several times, but there is still wide potential for further development, especially in the aspects of motifs, types of dyes, and tools used. This research aims to discuss layering techniques in batik with a focus on tool innovation and motif development, using a qualitative method with data collection techniques in the form of literature study, observation, and exploration. In addition, this research also aims to create fabric sheets by applying layering techniques to traditional batik, which is expected to make a significant contribution to the development of batik in the future.
