

ABSTRACT

Office Lounge is designed to accommodate various activities that can improve the quality of life and productivity of employees. This space does not only have one purpose, but has many purposes, namely for relaxation, work-related discussions, eating, drinking and social interaction, according to the needs of the client, this design applies the concept of user-centered design, namely prioritizing the lounge atmosphere to feel more alive, having various activities and facilities in it. By considering the existing colors, this project raises Mid-Century Modern as its design style which uses various shapes and concepts on furniture to support the needs of the office lounge and uses earth colors and neutral colors, so that the design of this lounge can attract more workers to visit this office lounge. This role is carried out together with PT. Optima Mitraselaras Design with several stages of work, namely site visits, briefings with clients, discussions on themes and concepts, making layouts, making 3D designs, making material lists and making working drawings. It is expected that the results of this design will be able to provide a space experience that supports comfort and productivity in the daily activities of users.

Keywords: Office Lounge, User Centered Design, Mid-century Modern.
